

What is GridSpy and what can it do for your business?

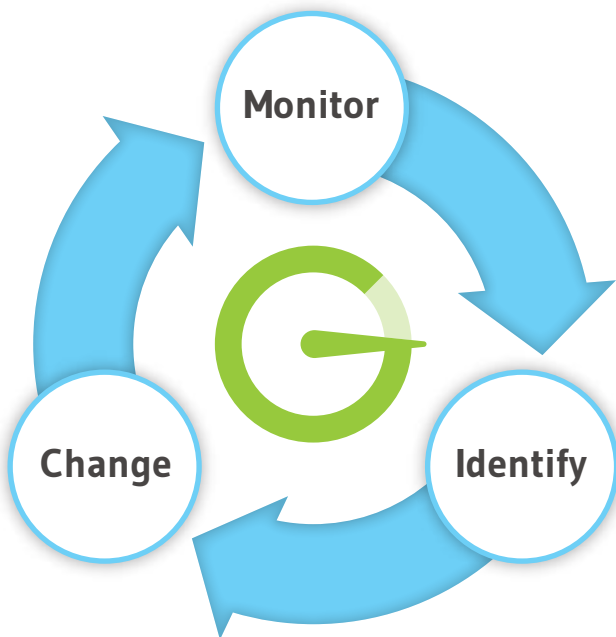

GridSpy provides the measurement you need to understand how your business uses energy and resources.

Your usage is presented clearly on a personalised web dashboard providing the evidence needed to make informed choices.

No data downloads, software maintenance, or installation is required by you because GridSpy does it all automatically via the web.

The GridSpy energy saving cycle

Monitor

Log into your GridSpy dashboard from anywhere and we'll give you a clear picture about where, when and how resources are being used in your business.

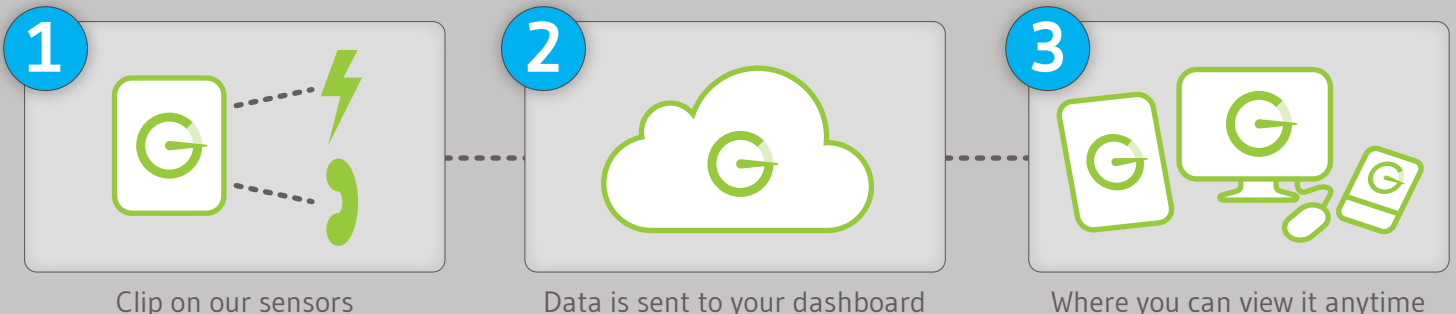

Identify

With information presented so clearly you'll have no trouble spotting areas where your business could be more efficient. We take away the guess work with clearer results than you'll ever get from your utility bills.

Change

Update wasteful equipment and change user behaviour where it really counts. And then start the cycle again to see those changes taking effect.

The GridSpy process in 3 easy steps:

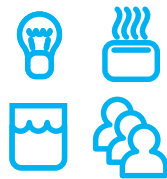

The GridSpy Solution

Available anywhere anytime

Aggregated second by second updates

Supplement with other sensors

Easy to share with stakeholders

Quick and easy installation process

You will save money
